

A PATH TO PREVENTION: →

State Profile: Florida

HPV vaccination is recommended for routine vaccination at **age 11 or 12 years and may be started at age 9**. Adults age 27 to 45 should talk to their doctors to see if HPV vaccination is recommended for them.

HPV vaccination protects against more than 90% of HPV cancers.

HPV VACCINATION RATES FOR 13-17 YEAR-OLDS AS OF 2021:

Florida has increased HPV vaccination coverage of **≥1 dose by 12% and up-to-date (UTD) by 9% since 2016**. However, coverage remains **lower than the U.S. average** and below the Healthy People 2030 goal of 80% UTD. Compared to meningitis and whooping cough (Tdap) vaccines routinely recommended for adolescents, HPV vaccination coverage lags. Florida vaccination rates **among 13-17 year olds were 77% for meningitis vaccine and 90% for Tdap vaccine in 2021**.

HPV VACCINATION RATES FOR 13-17 YEAR-OLDS AS OF 2019:

HPV Vaccination by Race/Ethnicity

HPV Vaccination by Insurance Coverage

HPV Vaccination by Urbanicity

HPV Vaccination by Sex

----- Healthy People 2030

■ ≥1 HPV Vaccination

■ HPV Vaccination Up-to-date

HPV vaccination data sources: CDC NIS-TEEN, 2019; TeenVax View, 2019

HPV CANCERS:

HPV is a common virus linked to six types of cancer. The two most common HPV-associated cancers are oropharyngeal and cervical cancers. **Incidence rates of HPV cancers overall and oropharyngeal and cervical cancers are higher in Florida compared to the U.S. averages.**

New Cases

	All HPV Cancers	Oropharyngeal Cancer	Cervical Cancer
United States Overall	12.5	5.2	7.2
Florida Overall	14.2	6.3	8.3
United States	Male: 11.2, Female: 13.9	Male: 9.1, Female: 1.7	Florida ranks in the Top 15 Nationally in cervical cancer incidence rates.
Florida	Male: 13.0, Female: 15.5	Male: 11.0, Female: 2.1	

Incidence rates shown are cases per 100,000 persons.

ACTION STEPS:

Identify and engage key stakeholders in HPV vaccination efforts through vaccination and cancer prevention stakeholders in Florida to develop, implement, and evaluate an action plan for increasing HPV vaccination coverage:

- Align with existing efforts to promote vaccinations to optimize impact.
- Increase on-time HPV vaccination overall and specifically focus on completion rates among adolescents who have initiated the HPV vaccination series and adolescents living in rural areas.
- Monitor and mitigate the ongoing effects of the COVID-19 pandemic on HPV vaccination and consider co-administration of HPV vaccination with other recommended vaccinations.

Implement priority evidence-based interventions in clinical and community settings, such as:

- Promote strong health care provider recommendations, integrate quality improvement approaches to build supportive clinical systems, use reminder and recall approaches, and reduce missed opportunities.
- Build HPV vaccination confidence in the public, especially among parents and caregivers, to increase HPV vaccination.
