

## A PATH TO PREVENTION: →

# State Profile: Kentucky

HPV vaccination is recommended for routine vaccination at **age 11 or 12 years and may be started at age 9**. Adults age 27 to 45 should talk to their doctors to see if HPV vaccination is recommended for them.

## HPV VACCINATION RATES FOR 13–17 YEAR-OLDS AS OF 2021:

Kentucky has increased HPV vaccination coverage of **≥1 dose by 22% and up to date (UTD) by 23% since 2016**. However, coverage remains **lower than the U.S. average** and below the Healthy People 2030 goal of 80% UTD. Compared to meningitis and whooping cough (Tdap) vaccines routinely recommended for adolescents, HPV vaccination coverage lags. Kentucky vaccination rates **among 13–17 year olds were 88% for meningitis vaccine and 84% for Tdap vaccine in 2021**.

**HPV vaccination protects against more than 90% of HPV cancers.**

# HPV VACCINATION RATES FOR 13-17 YEAR-OLDS AS OF 2019:

**HPV Vaccination by Race/Ethnicity**

**HPV Vaccination by Insurance Coverage**

**HPV Vaccination by Urbanicity**

**HPV Vaccination by Sex**

----- Healthy People 2030      █ ≥1 HPV Vaccination      █ HPV Vaccination Up-to-date

### HPV CANCERS:

HPV is a common virus linked to six types of cancer. The two most common HPV-associated cancers are oropharyngeal and cervical cancers. **Incidence rates of HPV cancers overall and oropharyngeal cancer are higher in Kentucky compared to the U.S. averages.**

#### New Cases

	All HPV Cancers	Oropharyngeal Cancer	Cervical Cancer
United States Overall	12.5	5.2	7.2
Kentucky Overall	16.4	6.8	9.0
United States	Male: 11.2, Female: 13.9	Male: 9.1, Female: 1.7	Kentucky ranks in the <b>Top 10 Nationally</b> in cervical cancer incidence rates.
Kentucky	Male: 14.5, Female: 18.4	Male: 11.4, Female: 2.5	

Incidence rates shown are cases per 100,000 persons.

### ACTION STEPS:

**Identify and engage key stakeholders in HPV vaccination efforts through vaccination and cancer prevention stakeholders in Kentucky to develop, implement, and evaluate an action plan for increasing HPV vaccination coverage:**

- Align with existing efforts to promote vaccinations to optimize impact.
- Increase on-time HPV vaccination overall and specifically focus on completion rates among adolescents who have initiated the HPV vaccination series and adolescents living in rural areas.
- Monitor and mitigate the ongoing effects of the COVID-19 pandemic on HPV vaccination and consider co-administration of HPV vaccination with other recommended vaccinations.

**Implement priority evidence-based interventions in clinical and community settings, such as:**

- Promote strong health care provider recommendations, integrate quality improvement approaches to build supportive clinical systems, use reminder and recall approaches, and reduce missed opportunities.
- Build HPV vaccination confidence in the public, especially among parents and caregivers, to increase HPV vaccination.
