HPV vaccination is recommended for routine vaccination at age 11 or 12 years and may be started at age 9. Adults age 27 to 45 should talk to their doctors to see if HPV vaccination is recommended for them.

Puerto Rico has increased HPV vaccination coverage of ≥1 dose by 10% and up-to-date (UTD) by 14% since 2016 and has one of the highest levels of HPV vaccination coverage. However, UTD coverage remains below the Healthy People 2030 goal of 80% UTD. Compared to meningitis and whooping cough (Tdap) vaccines, HPV vaccination coverage is very similar among 13-17-year-olds with 88% vaccinated against meningitis and 85% against whooping cough in 2021.

HPV CANCERS:
HPV is a common virus linked to six types of cancer. The two most common HPV-associated cancers are oropharyngeal and cervical cancers. Incidence rates of HPV cancers overall and for cervical cancer are higher in Puerto Rico compared to the U.S. averages.

ACTION STEPS:
Identify and engage key stakeholders in HPV vaccination efforts through vaccination and cancer prevention stakeholders in Puerto Rico to develop, implement, and evaluate an action plan for increasing HPV vaccination coverage:

- Align with existing efforts to promote vaccinations to optimize impact.
- Increase on-time HPV vaccination overall and specifically focus on completion rates among adolescents who have initiated the HPV vaccination series.
- Monitor and mitigate the ongoing effects of the COVID-19 pandemic on HPV vaccination and co-administer HPV vaccination with other recommended vaccinations.

HPV Vaccination School-entry Requirement

- In 2018, Puerto Rico made HPV vaccination a school-entry requirement for adolescents aged 11-12. With already high levels of HPV vaccination coverage, this strategy is likely to result in further increases reaching the Healthy People 2030 goal of 80%.
