

WHAT IS LIFEIMAGE CLOUD?

lifeIMAGE Cloud solution addresses our need for image sharing between sites that are not located in the same location. Image sharing can be for many different reasons including:

- A patient is transferred or referred from one point of care to another. Images at the point of origin need to be made available to the destination.
- A clinician would like to provide their patient's imaging to another institution, for a second opinion.
- New imaging is performed on a patient. This imaging needs to be made available to the patient's referring physician.
- New imaging is performed on a patient. The patient would like an electronic copy of the images, so as not to have to carry a CD around with them on every clinical encounter.
- A patient would like to make their imaging available to their primary care physician

How does lifeIMAGE Cloud work?

lifeIMAGE Cloud accomplishes image share by providing features such as

- a website you can [log in](#) to with your web browser
- a tool to [upload CDs](#)
- a tool to [pull exams out of your PACS](#)
- a mechanism to [connect](#) with other lifeIMAGE users or [invite](#) new users to the network
- a zero-download viewer to [view](#) the actual images
- a mechanism to [share](#) images with others
- a way to [associate additional documents](#) to images

Connections Overview

Connections are made up of 3 components, which are described in this subsequent sections.

- [Configuring your network profile](#) allows you to specify how you appear to others on the network, and who can find you.
- [Connecting with others](#) is how you search the lifeIMAGE network and request that others connect with you for the purpose of image sharing.
- [Inviting others to lifeIMAGE](#) is what you do to reach out to people who, after performing a search, you realize are not yet on the lifeIMAGE network.
